Subject: Personal Website/Portfolio Project - Part 2 Submission

Dear Soma,

I hope you are doing well.

Here is for you the 2nd part of my personal website/portfolio project. I read the feedback that you gave me for the first part and I totally agree with it, I need to work a bit on the organisation of my files to avoid them to get messy so I will definitely take that feedback and run with it while doing my best. As for the 2nd part of this assignment using JavaScript, I can tell you right now that this was more of a challenge but I think you prepared us well for this. Out of all 3 of HTML, CSS and JavaScript, JavaScript is the one that gives me the most challenge and that I think will need time to practice master.

I was able to implement multiple features that make my website interactive like the API's, a search function for my project and even a contact form. Of course all the information on my website is fake except for some API's but I will be able to remove this information and put my real information once I have enough progress on my own projects and achievements.

Funnily enough, the thing that gave me the most struggle in this assignment is creating a scrollbar for my website. This idea would not work at all no matter what I did even with the help of AI until I figured it out. Solving this problem felt really good after being stuck on it for multiple hours and I enjoy this part of the work we do.

Regarding the API's, I think they are really useful and will definitely make sure to use them in the future, however I think I still need practice implementing them in my website manually. I had assistance of the AI and I do understand what it did and how they work but it's the part with the key that sometimes confuses me and do I need to always have a key in hand to use API's and is it always the same key forever? It would be good to know this information or maybe clarify a bit with the class just to make sure we all understand this concept.

With that in mind, please receive my personal website project and I thank you Soma for everything you do.

Kind regards,

Wilmer Bacca
